Assignments

1. Accept	a char input from the user an	ıd display	it on the console.		
Code of the	e program & screenshot of th	e output.			
2. Accept	two inputs from the user and	output its	s sum.		
	Variable	Data Ty	pe		
	Number 1	Integer			
	Number 2	Float			
	Sum	Float			
Code of the	e program & screenshot of th	e output.			
3. Write a	program to find the simple i	nterest.			
	e program should accept 3 in			nte simple intere	st
for	the given inputs. Formula: S	I=(P*K*r	1)/100)		
	Variable		Data Type		
	Principal amount (P)		Integer		

Interest rate (R)	Float
Number of years (n)	Float
Simple Interest (SI)	Float

- 4. Write a program to check whether a student has passed or failed in a subject after he or she enters their mark (pass mark for a subject is 50 out of 100).
 - a. The program should accept input from the user and output a message as "Passed" or "Failed."

Variable	Data type
mark	float

Code of the program & screenshot of the output.

- 5. Write a program to show the grade obtained by a student after they enter their total mark percentage.
 - a. The program should accept input from the user and display their grade as follows

Mark	Grade
> 90	The program
80-89	В
70-79	С
60-69	D
50-59	Е
< 50	Failed

Variable	Data type
Total mark	float

6. Using the 'switch case,' write a program to accept an input number from the user and output the day as follows.

Input	Output
1	Sunday
2	Monday
3	Tuesday
4	Wednesday
5	Thursday
6	Friday
7	Saturday
Any other input	Invalid Entry

- 7. Write a program to print the multiplication table of given numbers.
 - a. Accept input from the user and display its multiplication table

E.g.:

Output: Enter a number

Input: 5

Output:

 $1 \times 5 = 5$

$$2 \times 5 = 10$$

$$3 \times 5 = 15$$

$$4 \times 5 = 20$$

$$5 \times 5 = 25$$

$$6 \times 5 = 30$$

$$7 \times 5 = 35$$

$$8 \times 5 = 40$$

$$9 \times 5 = 45$$

$$10 \times 5 = 50$$

- 8. Write a program to find the sum of all the odd numbers for a given limit
 - a. Program should accept an input as limit from the user and display the sum of all the odd numbers within that limit

For example if the input limit is 10 then the result is 1+3+5+7+9=25

Output: Enter a limit

Input: 10

Output: Sum of odd numbers = 25

Code of the program & screenshot of the output.

9. Write a program to print the following pattern (hint: use nested loop) 1 1 2 1 2 3 1234 12345 Code of the program & screenshot of the output. 10. Write a program to interchange the values of two arrays. a. Program should accept an array from the user, swap the values of two arrays and display it on the console Eg: Output: Enter the size of arrays Input: 5 **Output**: Enter the values of Array 1 **Input**: 10, 20, 30, 40, 50 Output: Enter the values of Array 2 **Input**: 15, 25, 35, 45, 55 Output: Arrays after swapping: Array1: 15, 25, 35, 45, 55 Array2: 10, 20, 30, 40, 50

- 11. Write a program to find the number of even numbers in an array
 - a. The program should accept an array and display the number of even numbers contained in that array

E.g.: Output: Enter the size of an array

Input: 5

Output: Enter the values of array

Input: 11, 20, 34, 50, 33

Output: Number of even numbers in the given array is 3

Code of the program & screenshot of the output.

- 12. Write a program to sort an array in descending order
 - a. Program should accept and array, sort the array values in descending order and display it

Eg: Output: Enter the size of an array

Input: 5

Output: Enter the values of array

Input: 20, 10, 50, 30, 40

Output: Sorted array:

50, 40, 30, 20, 10

Code of the program & screenshot of the output.

- 13. Write a program to identify whether a string is a palindrome or not
 - a. A string is a palindrome if it reads the same backward or forward eg:

MALAYALAM

Program should accept a string and display whether the string is a palindrome or not

Eg: Output: Enter a string

Input: MALAYALAM

Output: Entered string is a palindrome

Eg 2: Output: Enter a string

Input: HELLO

Output: Entered string is not a palindrome

Code of the program & screenshot of the output.

- 14. Write a program to add to two dimensional arrays
 - a. Program should accept two 2D arrays and display its sum

Eg: Output: Enter the size of arrays

Input: 3

Output: Enter the values of array 1

Input:

1 2 3

456

789

Output: Enter the values of array 2

Input:

10 20 30

40 50 60

70 80 90

Output: Sum of 2 arrays is:

11 22 33

44 55 66

77 88 99

Code of the program & screenshot of the output.

15. Write a program to accept an array and display it on the console using functions

a. Program should contain 3 functions including main() function

main()

- 1. Declare an array
- 2. Call function getArray()
- 3. Call function displayArray()

getArray()

1. Get values to the array

displayArray()

1. Display the array values

16. Write a java program to check whether a given number is prime or not

a. Program should accept an input from the user and display whether the number is prime or not

Eg: Output: Enter a number

Input: 7

Output: Entered number is a Prime number

Code of the program & screenshot of the output.

17. Write a menu driven java program to do the basic mathematical operations such as addition, subtraction, multiplication and division (**hint**: use if else ladder or switch)

a. Program should have 4 functions named addition(), subtraction(), multiplication() and division()

b. Should create a class object and call the appropriate function as user prefers in the main function

Code of the program & screenshot of the output.

18. Grades are computed using a weighted average. Suppose that the written test counts 70%, lab exams 20% and assignments 10%.

If Arun has a score of

Written test = 81

Lab exams = 68

Assignments = 92

Arun's overall grade = (81x70)/100 + (68x20)/100 + (92x10)/100 = 79.5

Write a program to find the grade of a student during his academic year.

- a. Program should accept the scores for written test, lab exams and assignments
- b. Output the grade of a student (using weighted average)

Eg:

Enter the marks scored by the students

Written test = 55

Lab exams = 73

Assignments = 87

Grade of the student is 61.8

Code of the program & screenshot of the output.

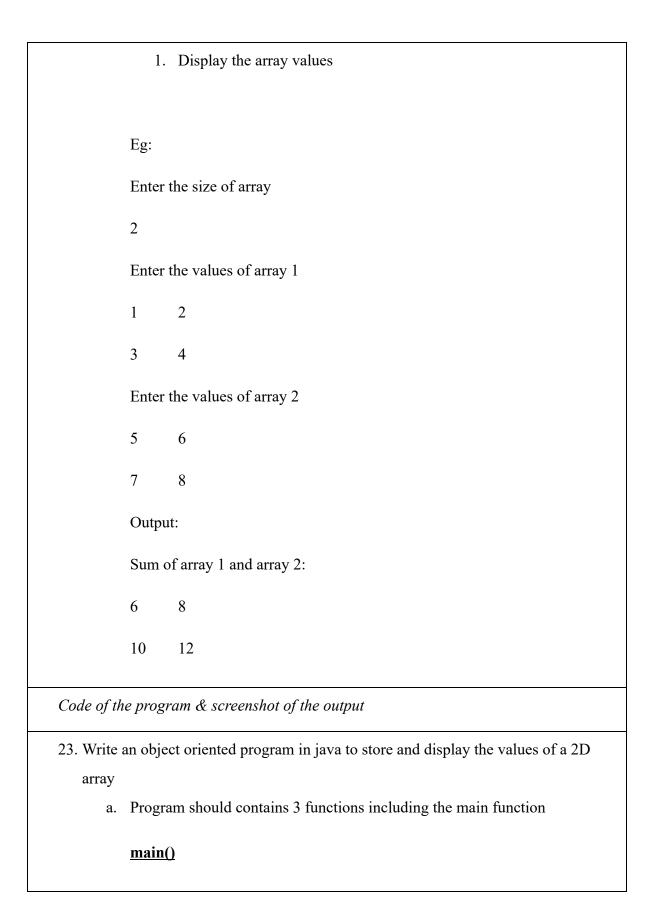

19. Income tax is calculated as per the following table

Annual Income	Tax percentage
Up to 2.5 Lakhs	No Tax
Above 2.5 Lakhs to 5 Lakhs	5%
Above 5 Lakhs to 10 Lakhs	20%
Above 10 Lakhs to 50 Lakhs	30%

Write a program to find out the income tax amount of a person.

a.	Program should accept annual income of a person					
	Output the amount of tax he has to pay					
	F., 4.					
	Eg 1:					
	Enter the annual income					
	495000					
	Income tax amount = 24750.00					
	Eg 2:					
	Enter the annual income					
	500000					
	Income tax amount = 25000.00					
Code of th	te program & screenshot of the output.					
20. Write	a program to print the following pattern using for loop					
1						
2	3					
2						
4	5 6					
7						
7	8 9 10					
Code of th	e program & screenshot of the output.					
21. Write	a program to multiply the adjacent values of an array and store it in an					
	another array					
a.	D 1 11					
b.						
0.	intuitipi, the adjacent varies					

c.	Store	the resu	ılt into	another	r array
	Eg:				
	Enter	the arra	ay limit		
	5				
	Enter	the valu	ues of a	array	
	1	2	3	4	5
	Outpu	t			
	2	6	12	20	
Code of th	he progr	ram & s	screens	hot of t	he output.
22. Write	a progr	am to a	add the	values	of two 2D arrays
a.					functions including the main function
	main()			
	1.	Call f	unction	n getArı	rav()
				ı addAr	
					yArray()
	getAr	ray()			
	1.	Get v	alues to	o the arr	ray
	getAr	ray()			
	1.	Add a	array 1	and arra	ay 2
	<u>displa</u>	yArra	<u>y()</u>		

1.	Declar	re an array						
2.	Call fu	unction getArray()						
3.	Call fu	nction displayArray()						
getArray()								
1.	Get va	lues to the array						
displa	<u>yArray</u>	O						
1.	Displa	y the array values						
Eg:								
Enter 1	the size	of array						
3								
Enter 1	the array	y values						
1	2	3						
4	5	6						
7	8	9						
Array	element	ts are:						
1	2	3						
4	5	6						
7	8	9						

24. Write	a menu	driven program in java to calculate the area of a given object.		
a.	Progr	am should contain two classes		
	i.	Class 1: MyClass		
	ii.	Class 2: Area		
b.	Class	MyClass should inherit class Area and should contain the following		
	functi	ions		
	i.	main()		
	ii.	circle()		
	iii.	square()		
	iv.	rectangle()		
	v.	triangle()		
c.	Class	Area should contain the following functions to calculate the area of		
	differ	ent objects		
	i.	circle()		
	ii.	square()		
	iii.	rectangle()		
	iv.	triangle()		
Class MyClass extends Area {				
	public	e static void main(string args[]){		
	}			
	circle	() {		
	}			
	squar	e() {		
	}			

```
rectangle() {
       triangle() {
       }
}
Class Area{
       circle(){
       }
       square(){
       }
       rectangle() {
       triangle() {
       }
       Eg 1:
       Enter your choice
           1. Circle
```
